Sezione Nazionale Pianeti UAI

Founded in 1989 by Marco Falorni

SATURN visual observing form

APPARITION -

OBSERVER _____

Date (yyyy/mm/dd) ____ / ____ / ____

from ____ : ____ UT to ____ : ____ UT

Seeing ____ Antoniadi

Telescope _____ ____ cm f/ ____

Diagonal _____

Site _____

TRANSPARENCY

- ☐ **EXCELLENT**
- ☐ **GOOD**
- ☐ **AVERAGE**
- ☐ **LOW**

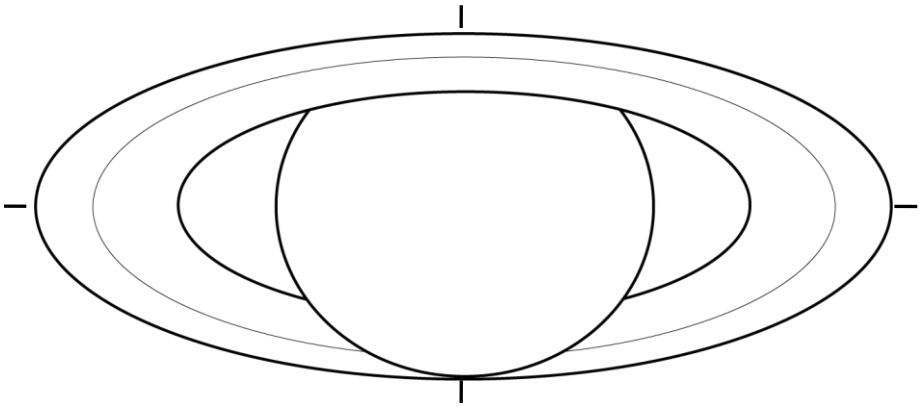
Planet altitude (°) ☐

Eq. globe diam. (") ☐

INTENSITY SCALE FOR SMALLER BLANK

0-10 values are used, where 0 corresponds to the brightest planetary detail detectable at the eyepiece and 10 to the darkest. As an example, you can assign 0 to Martian polar caps, 1 to average intensity of Saturn inner B ring and 10 to the sky background. A rough "colour index" can be given subtracting intensity estimated by means of a Wratten Blue filter to intensity estimated with Wratten Red filter.

Mark N, S, p, f to orient the blank. ***Prefer South@top***



B'=+24° *filter* ***W*** _____

UT ___ : ___	CM I ____ °
Magn. _____ X	CM II ____ °
Seeing _____ Ant.	CM III ____ °
